

Carbon Capture Utilization and Storage Certificate

Land Administration Certificate

September 2022

The Academic Planning Committee (APC) was asked to review two proposed undergraduate certificates one in Carbon Capture Utilization and Storage and one in Land Administration. The proposal states that there is no new funding required implementing these certificates. If the student demand exceeds the projections and additional sections are required additional funding may be necessary. The demand for the certificates is uncertain but seems to be growing with the emphasis on the environment. The list of potential courses that will serve as electives for the certificate is long. It is not clear that the instructors for these courses have been contacted to see if they can handle a potential increase in enrolment from the proposed certificates.

With no new resources being required, the APC is supportive of the proposed certificates.
